Roadworx Sound Masking Solutions
RWSM-SK-VC.
(Volume Control Knob)

smartSMS-NET Sound Masking System Volume Control

For some applications, it's useful to have a volume control knob directly on the speaker line. This is useful namely to provide a different volume for each speaker line or to provide a different volume for a sub portion of a zone. The RWSM-SK-VC provides this functionality and control.

Refer to the User Guide for wiring instructions.
